

Prepping your files for Raw Edit Studio

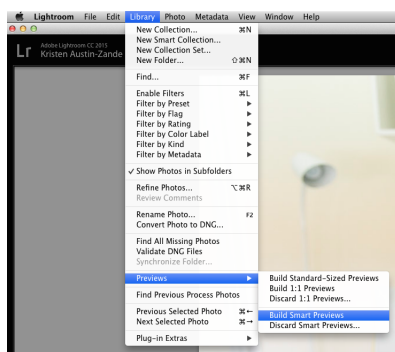

- File > new catalog. Give it a name and direct it to go in the folder with the raw images.
- When LR reopens click File > import photos & video. Navigate to the images and make sure that you've clicked **Build Smart Previews** on the right hand side (see image). This makes a virtual copy of the raws so it's a lot smaller and we don't actually have the images.

OR

If you already have an independent catalog for it then

- Go to the Library tab, select all of the raws and then click Library > Previews > Build Smart Previews

- Go to the folder containing the Lightroom catalog you're working in and you'll see the Smart Previews.lrdata file
- Put that file as well as the Preview.lrdata and the the .lrcat file into a folder and zip it.

Chris and Yulia
LRC.zip

- Send to Raw Edit Studio via dropbox. Email the link to hello@raweditstudio.com.au when the upload is complete. *Regular clients will have a shared dropbox folder that we will link them in to. If this is your case then please put the zipped folder into your folder called To-do*

If you are requiring Photoshop adjustments to your images or prefer that we work on the original files then please post a hard drive or USB stick with the raw files in an appropriate folder and post to the address below. You do not have to follow the steps above. We will return your images on the same device when complete.

If you require further information please email us at hello@raweditstudio.com.au
